A complete Cargo System Retrofit Kit consists of:

- One or two motors
- Mounting plates if single side motors are chosen
- HMI "CargoRemote" (Human Machine Interface)
- Optional: Display "CargoView"
- Splitter cable
- A speed sensor with magnetic disk or a BB torque sensor
- Extension cable
- Optional: throttle and switch for start help
- Optional: throttle and switch for reverse drive
- Controller box (Master for one motor, Master and Slave for two motors)
- HIGO battery connector or battery cable assembly, depending on which third party battery is chosen.

A list of smart batteries that communicate with the CP-System through the CAN-BUS is available on request.

Batteries not on that list (36V or 48V) can be used as well but will not communicate with the software. If such batteries are used, the system can only be powered on and off at the battery itself (not through the HMI).
